CSE 4701 Fall 2023

Homework 1: Due 11:59 pm, September 20 (Wed), 2023 at HuskyCT

In 7th Edition of the textbook

- 1. Problem 8.16 (pg. 281-282): a, c, e, and g. (Figure 5.6 will be more helpful doing this problem instead of Figure 5.5. Figure 5.6 is enclosed below).
- 2. Problem 8.18 (pg. 282): a, c, and f
- 3. Problem 8.22 (pg. 284): a, c, and f

Each subproblem 10 points. Total 100 points.

Report Format: Your report must be one PDF document with your full name as the file name (e.g., JohnDoe.pdf). The first line of your report must include "Your full name, Homework 1 (or Project 1 Part 1)" for easy identification for grading purpose. Also answers must be given following the sequential order of the problems given. Otherwise, penalty points will be assessed.

HWs and Projects: 5% penalty for one-day late submission (except medical reasons).

Problem sets are repeated below using the 7th edition.

- 8.16. Specify the following queries on the COMPANY relational database schema shown in Figure 5.5 using the relational operators discussed in this chapter. Also show the result of each query as it would apply to the database state in Figure 5.6.
 - a. Retrieve the names of all employees in department 5 who work more than 10 hours per week on the ProductX project.
 - List the names of all employees who have a dependent with the same first name as themselves.
 - Find the names of all employees who are directly supervised by 'Franklin Wong'.
 - For each project, list the project name and the total hours per week (by all employees) spent on that project.
 - e. Retrieve the names of all employees who work on every project.
 - f. Retrieve the names of all employees who do not work on any project.
 - g. For each department, retrieve the department name and the average salary of all employees working in that department.
 - Retrieve the average salary of all female employees.

Figure 5.6

One possible database state for the COMPANY relational database schema.

- 8.18. Consider the LIBRARY relational database schema shown in Figure 8.14, which is used to keep track of books, borrowers, and book loans. Referential integrity constraints are shown as directed arcs in Figure 8.14, as in the notation of Figure 5.7. Write down relational expressions for the following queries:
 - a. How many copies of the book titled *The Lost Tribe* are owned by the library branch whose name is 'Sharpstown'?
 - b. How many copies of the book titled *The Lost Tribe* are owned by each library branch?
 - Retrieve the names of all borrowers who do not have any books checked out.
 - d. For each book that is loaned out from the Sharpstown branch and whose Due_date is today, retrieve the book title, the borrower's name, and the borrower's address.
 - For each library branch, retrieve the branch name and the total number of books loaned out from that branch.
 - Retrieve the names, addresses, and number of books checked out for all borrowers who have more than five books checked out.
 - g. For each book authored (or coauthored) by Stephen King, retrieve the title and the number of copies owned by the library branch whose name is Central.

Figure 8.14
A relational database schema for a LIBRARY database.

- **8.22.** Consider the two tables T1 and T2 shown in Figure 8.15. Show the results of the following operations:
 - a. $T1 \bowtie_{T1.P = T2.A} T2$
 - b. $T1 \bowtie_{T1.Q = T2.B} T2$
 - c. $T1 \bowtie_{T1.P = T2.A} T2$
 - d. $T1 \bowtie T_{1.Q = T2.B} T_2$
 - e. $T1 \cup T2$
 - f. $T1 \bowtie (T1.P = T2.A \text{ and } T1.R = T2.C) T2$

Figure 8.15
A database state for the relations 71 and 72.
